

How to set up Dbstar X media player software

Let me do a simple guide for you to setup dbstar 9.0 x media player software

1: Please confirm your computer ip address is 192.168.1.xx, xx means from 1-255 except 228, due to our control card ip address is 192.168.1.228
So you can set up 192.168.1.2 / 192.168.1.3/.....

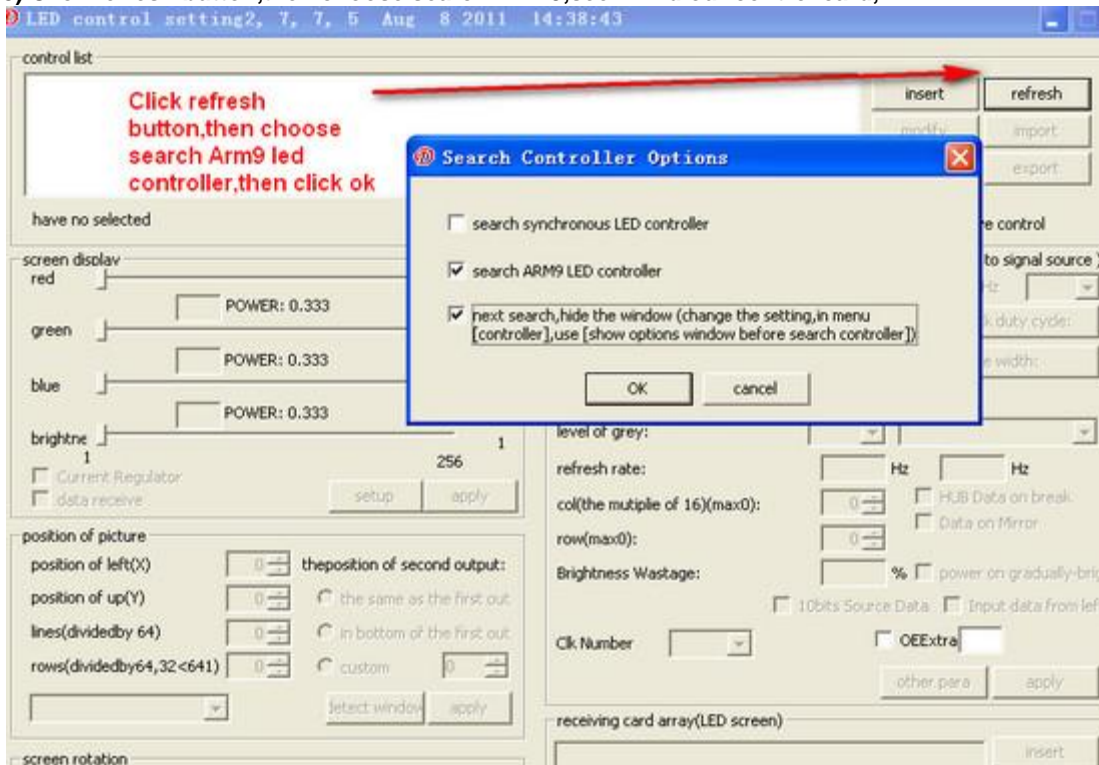

1) Click led controller config

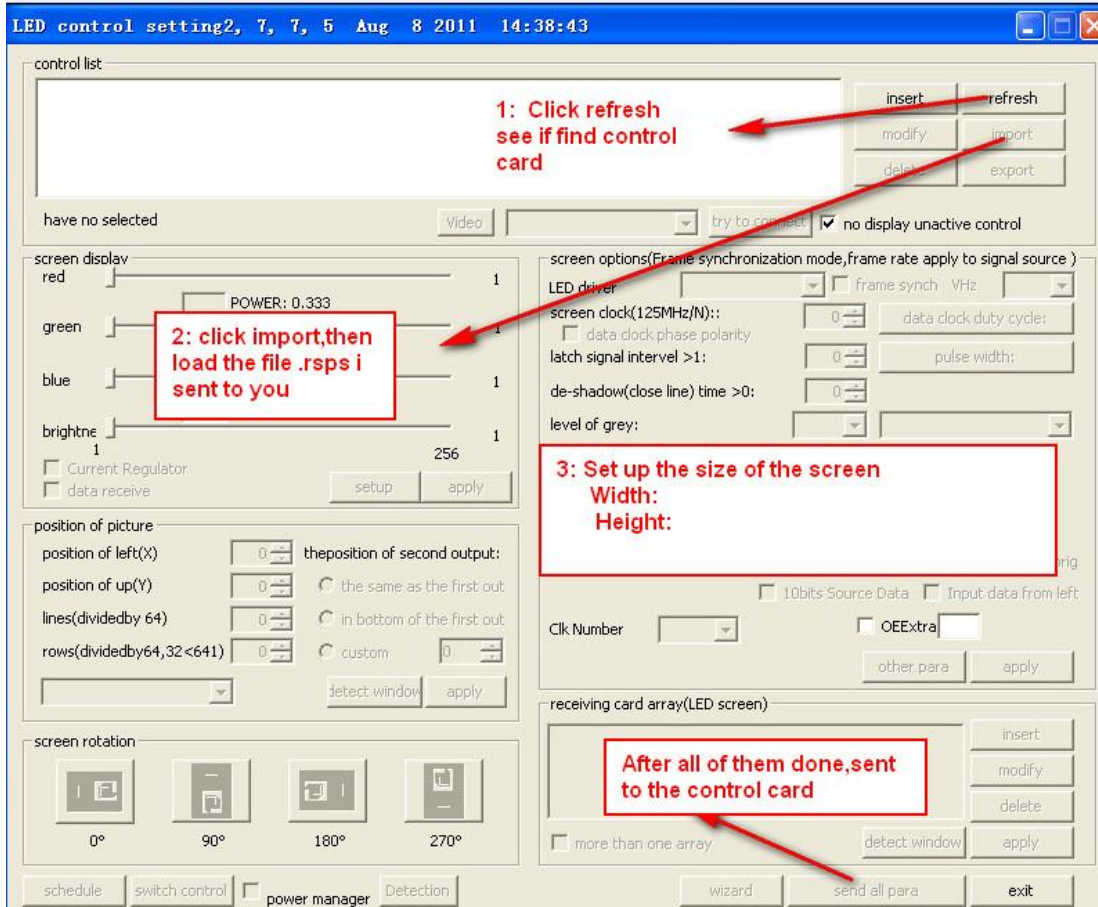

2) Then click para setting, Type the password "dbstarled"

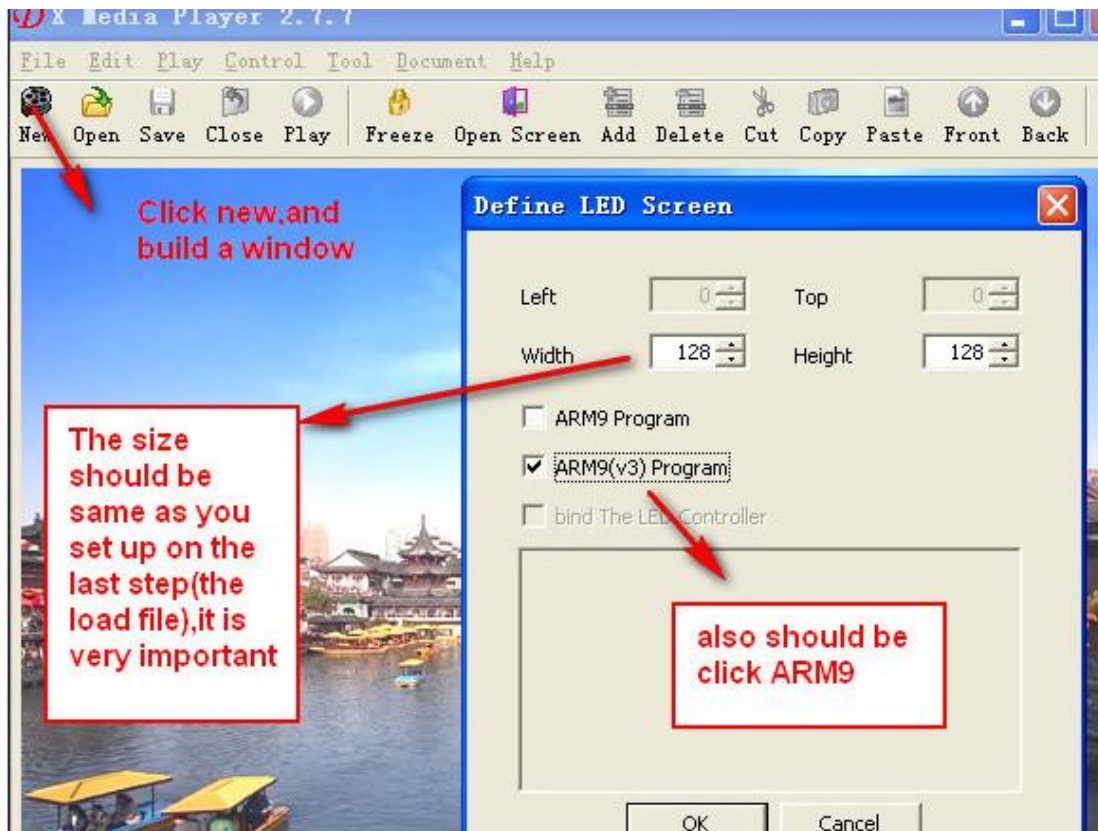

3) Click refresh button, then choose search ARM9, see if find our control card,

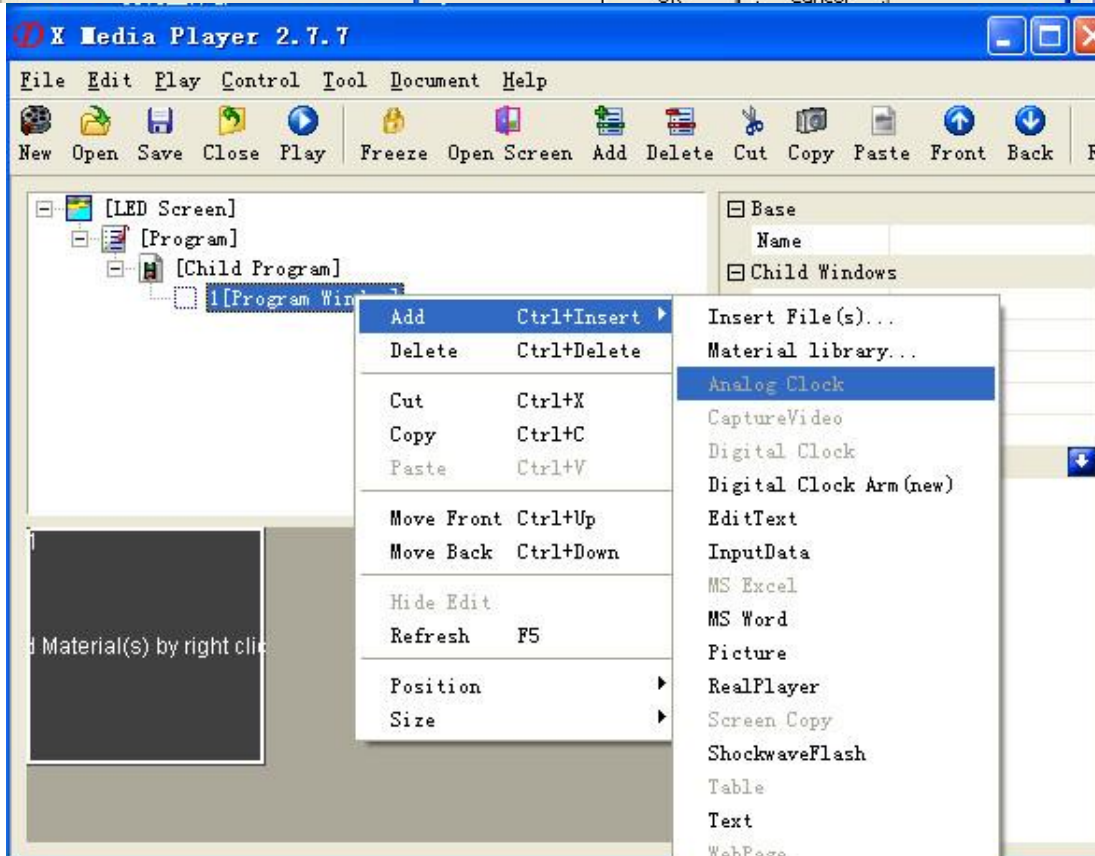

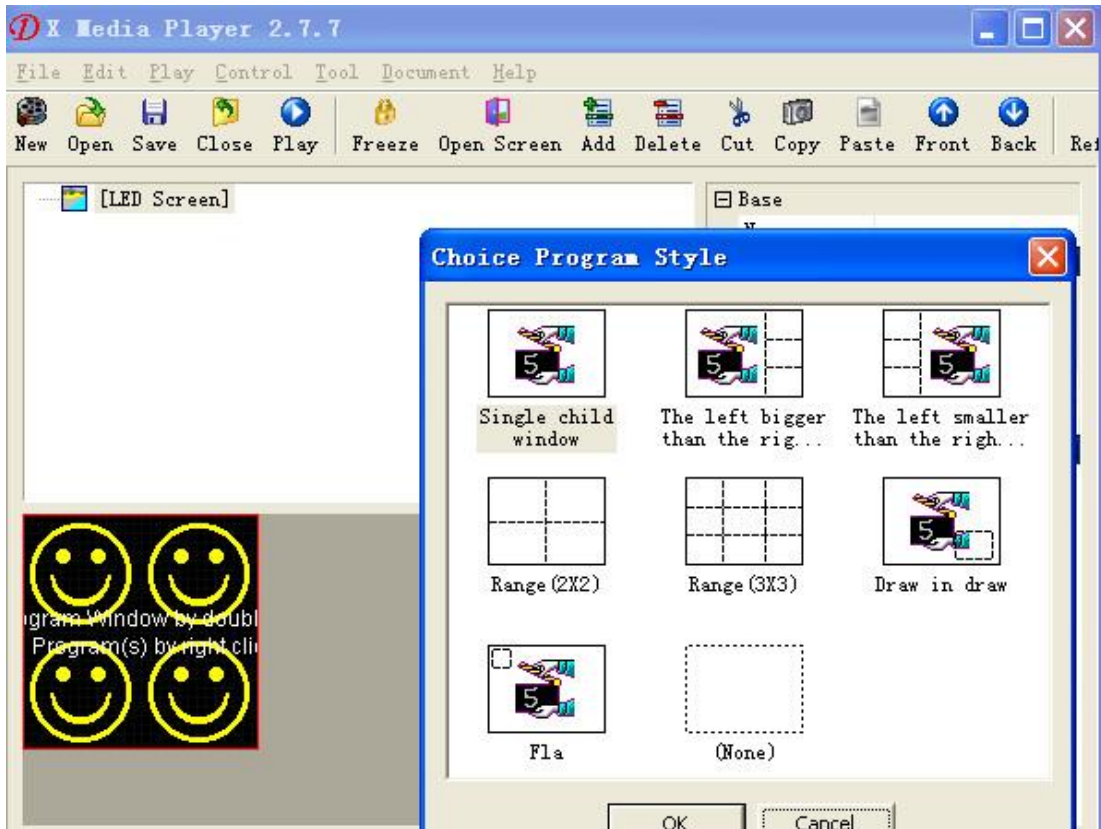

4) click import, load the .rspi file i sent to you, then set up the screen size you have, then sent all para

5) click new button, then build [a window](#), set up the size you wanna, but the size must same with before you set up on load file

6) choose program style, then add the video, images or character you want

7) after all of set up done,choose control then click sent to arm9,all of work done
